

Table 26. Statistical summary for the 28-day bed-sediment chronic toxicology study (batch 2) of the control and environmental samples collected from the harbors and bays in New Jersey and New York during the Hurricane Sandy reconnaissance study, July–August 2013, and analyzed for the estuarine amphipod *Leptocheirus plumulosus* by survival rate, biomass, individual dry weight, and reproductive effects.

[Map location number refers to figures 2 and 3. Samples were analyzed at the U.S. Army Corps of Engineers Engineer Research and Development Center, Vicksburg, Mississippi, and are archived in a project database. n, sample size; **bold**, indicates value is significantly different from that for the control sample; --, not applicable]
